DETAILED ACTION

Applicants' amendment dated 02/07/2007 has been received and entered. Claims 1-2, 4-9, 11-15, 17-21, 23 and 24 are pending the application. Claims 22 and 25 stand withdrawn from consideration.

Applicant's arguments filed 02/07/2007 have been fully considered and are persuasive. Therefore, the final rejection dated 09/07/2007 has been withdrawn. However, upon further consideration and discover the new art, a new ground(s) of rejection is made as follow.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 5, 7-9, 12, 14, 15, 18 and 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ha, US Patent No. 6,081,307, in view of Kim et al., US 6,246,074.

Regarding the above claims, Ha discloses a liquid crystal display (LCD) device and a method of forming the same (figure 5) comprising:

- . a plurality of data lines (5);
- . a plurality of gate lines (4);
- . a source driver (6), wherein a source printer circuit board inherently formed for supplying signal and grounding;
- . a gate driver (7);

. a plurality of common voltage lines (8);
. a plurality of static electricity preventing units (15); wherein at least one of the static electricity preventing unit (46) is directly connected to the gate/source driver as claimed (see figure 5).

Ha, however, does not disclose a first dummy line connected to the gate lines and the common voltage line through the static electric preventing units. Kim et al. do disclose a dummy line (a low level gate line 42) can be connected to a gate line (30) and a common voltage line (44 connected to 36A) through a static electricity preventing unit (40). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ the Ha's device including a dummy line that connected to the gate line and the common voltage line through a static electricity preventing unit as shown by Kim et al. in order to protect a driving thin film transistor (TFT) from the static electricity (see col. 7, ln 45).

3. Claims 6, 13 and 19 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Ha, US Patent No. 6,081,307, in view of Kim et al., US 6,246,074.

Regarding the above claims, Ha does not disclose a silver dot in the LCD device. It would have been obvious to one of ordinary skill in the art to employ at least one silver dot in an LCD device as evidence from Applicants' Related Art (see page 2, line 1 and figure 1) in order to supply a common voltage to a common electrode.

Allowable Subject Matter

4. Claims 20-21 are allowed.

5. Claims 4, 11 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter:

None of the prior art of record discloses or suggests alone or in combination that an LCD device comprising a combination of various elements as claimed more specifically of first and second dummy lines connected to gate/data lines and common voltage lines through static electricity preventing units as set forth in claims 4, 11, 17 and 20.
